

IPVled®
Lichttechnik

Falke - Street Light

Falke caters to streetlight applications, where the working height ranges from 3 to 12 meters and where Bright, even and consistent performance lighting is required to maintain lighting standards for street lighting. In addition, IPVled products guarantee at least a 70% savings on power when replaced with traditional HID bulbs, which is an important feature to consider when street lights compose most of the urban lighting. Furthermore, IPVled products can be individually customised to deliver light for varying situations. All of the IPVled products are designed to be lightweight, powerful, durable and highly customisable which are key features that distinguish IPVled from other brands.
